
How to set up the DynaMed app on your Apple or Android mobile device

Download the “DynaMed Plus” app to your Apple or Android device.

Log into DynaMed Plus using one of these two methods:

On a UHL computer, go to uptodate.xuhl-tr.nhs.uk and then click on the ‘Launch DynaMed’ button on the right-hand side.

Or, go to www.uhl-library.nhs.uk/dynamed and log in with your UHL Athens username/password.

Click on the ‘Get the DynaMed Plus Mobile App’ link on the left-hand side of the screen in the ‘Spotlight’ section.

Enter an email address which you can get access to on the device that you wish to use the app on. Then click on ‘Send’.

An email will be sent to the address you have entered. Look at this email (from donotreply@ebSCO.com) on the device that you want to use the app on, and follow the instructions in the email.

- 1) Download the ‘DynaMed Plus’ app, if you haven’t already done so.
 - 2) Click on the ‘authentication key’ link in the email.
-

Because you click on the link on your device, it will automatically open and approve access to the app on this device. The app will need to download the content to your device before use. This may take some time and you should ensure that you are connected to a good WiFi network unless you want to use mobile data for this.

Ebsco’s official help page on use of the DynaMed Plus app can be found here:
