

These are the steps involved in conducting a systematic review.

### Steps in the review process

Create a focused  
topic/question

Conduct a systematic search  
of the literature

Assess the relevance of the  
literature found

Assess the quality of the  
relevant literature

Summarise the findings of the  
evidence

Interpret the findings of the  
synthesised evidence

### Library assistance available

- Literature search training
- Advice from library staff
- Library staff conducting a search for you

- 'Critical Reading Made Easy' training
